

Commercial Bank WordPress Responsive Design

The Project

[Commercial Bank](#) wanted a new website design that was responsive and gave the site a fresh more modern look while allowing their clients to have mobile access.

The Solution

Unidev's web design and development team created a visually appealing responsive website in the WordPress content management system. The CMS allows the client to easily control and update their content quickly as needed.

Biggest Win

Before the redesign project, the client had two websites to maintain: a .mobi site for their mobile customers and a .com site for their desktop users. The redesign project eliminated the need for two websites. The responsive design allows the client the benefit of having just one site which gives users access to the site on any device connected to the internet.

Additional Information

Following the launch of the new website, the client received the following message, "I noticed you guys just revamped your website. It looks amazing from my computer and my Phone!!! It's certainly going to grab your customers' attention, and definitely appeal to everyone, especially the younger, tech savvy customers."
